DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Segura et al. (U.S. Patent No. 6,360,076) in view of Hsu et al. (U.S. Pub. No. 2003/0054807).

Claims 1, 2, 7, Segura discloses:

- a communication quality acquirer configured to acquire the communication quality from each of the plurality of mobile stations belonging to the specific multicast group (col. 2, lines 26-32)

Segura fails to disclose:

- a transmission method changer configured to determine a number of transmission signal repetitions by the multicast communication, in accordance with the acquired communication quality; and

- a transmitter configured to transmit the signal to the plurality of mobile stations using determined number of transmission signal repetitions

However, Hsu discloses:

- a transmission method changer configured to determine a number of transmission signal repetitions by the multicast communication, in accordance with the acquired communication quality ([0082], lines 12-14); and
- a transmitter configured to transmit the signal to the plurality of mobile stations using determined number of transmission signal repetitions ([0084], lines 7-9)

Because Hsu discloses his multiple transmission method allows for improving the overall frame error rate and increase the longevity of battery life ([0082], lines 1-7), it would have been obvious to one skilled in the art at the time of invention to incorporate the transmission repetition as disclosed by Hsu into the invention of Segura.

Claim 5, Hsu further discloses a radio resource manager configured to manage radio resources of the radio station and wherein the transmission method changer determines the number of transmission signal repetitions in accordance with the acquired communication quality and the situation of a radio resource ([0082], lines 12-14).

Claim 6, Hsu further discloses the communication quality includes at least one of a received power, a signal error rate, an interference signal level and a signal-to-interference ratio ([0082]).

Allowable Subject Matter

4. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
